1. What is Machine learning?
   a) The autonomous acquisition of knowledge through the use of computer programs
   b) The autonomous acquisition of knowledge through the use of manual programs
   c) The selective acquisition of knowledge through the use of computer programs
   d) The selective acquisition of knowledge through the use of manual programs

2. Which of the factors affect the performance of learner system does not include?
   a) Representation scheme used
   b) Training scenario
   c) Type of feedback
   d) Good data structures

3. 3. Different learning methods does not include?
   a) Memorization
   b) Analogy
   c) Deduction
   d) Introduction

4. In language understanding, the levels of knowledge that does not include?
   a) Phonological
   b) Syntactic
   c) Empirical
   d) Logical

5. 5. A model of language consists of the categories which does not include?
   a) Language units
   b) Role structure of units
   c) System constraints
   d) Structural units

6. 6. What is a top-down parser?
   a) Begins by hypothesizing a sentence (the symbol S) and successively predicting lower level constituents until individual preterminal symbols are written
   b) Begins by hypothesizing a sentence (the symbol S) and successively predicting upper level constituents until individual preterminal symbols are written
   c) Begins by hypothesizing lower level constituents and successively predicting a sentence (the symbol S)
   d) Begins by hypothesizing upper level constituents and successively predicting a sentence (the symbol S)
7. Among the following which is not a horn clause?
   a) p
   b) Øp V q
   c) p → q
   d) p → Øq
8. The action 'STACK(A, B)' of a robot arm specify to _____
   a) Place block B on Block A
   b) Place blocks A, B on the table in that order
   c) Place blocks B, A on the table in that order
   d) Place block A on block B
9. 1. Which instruments are used for perceiving and acting upon the environment?
   a) Sensors and Actuators
   b) Sensors
   c) Perceiver
   d) None of the mentioned
10. What is meant by agent's percept sequence?
   a) Used to perceive the environment
   b) Complete history of actuator
   c) Complete history of perceived things
   d) None of the mentioned
   View Answer

11. 3. How many types of agents are there in artificial intelligence?
a) 1
b) 2
c) 3
d) 4

12. What is the rule of simple reflex agent?
a) Simple-action rule
b) Condition-action rule
c) Simple & Condition-action rule
d) None of the mentioned

13. 5. What are the composition for agents in artificial intelligence?
a) Program
b) Architecture
c) Both Program & Architecture
d) None of the mentioned

14. In which agent does the problem generator is present?
a) Learning agent
b) Observing agent
c) Reflex agent
d) None of the mentioned

15. 7. Which is used to improve the agents performance?
a) Perceiving
b) Learning
c) Observing
d) None of the mentioned

16. Which agent deals with happy and unhappy states?
a) Simple reflex agent
b) Model based agent
c) Learning agent
d) Utility based agent

17. 9. Which action sequences are used to achieve the agent's goal?
a) Search

b) Plan
c) Retrieve
d) Both Search & Plan

18. Which element in the agent are used for selecting external actions?
a) Perceive
b) Performance
c) Learning
d) Actuator

19. What is Artificial intelligence?
a) Putting your intelligence into Computer
b) Programming with your own intelligence
c) Making a Machine intelligent
d) Playing a Game

20. 2. Which is not the commonly used programming language for AI?
a) PROLOG
b) Java
c) LISP
d) Perl
View Answer

21. 3. Artificial Intelligence has its expansion in the following application.
a) Planning and Scheduling
b) Game Playing
c) Diagnosis
d) All of the mentioned

22. What is an ‘agent’?
a) Perceives its environment through sensors and acting upon that environment through actuators
b) Takes input from the surroundings and uses its intelligence and performs the desired operations
c) A embedded program controlling line following robot
d) All of the mentioned

23. 5. Agents behavior can be best described by _____
a) Perception sequence
b) Agent function
c) Sensors and Actuators
d) Environment in which agent is performing

24. Rational agent is the one who always does the right thing.
a) True
b) False

25. 7. Performance Measures are fixed for all agents.
a) True
b) False

26 What is rational at any given time depends on?
a) The performance measure that defines the criterion of success
b) The agent's prior knowledge of the environment
c) The actions that the agent can perform
d) All of the mentioned

27 9. An omniscient agent knows the actual outcome of its actions and can act accordingly; but omniscience is impossible in reality. Rational Agent always does the right thing; but Rationality is possible in reality.
a) True
b) False

28 The Task Environment of an agent consists of _____
a) Sensors
b) Actuators
c) Performance Measures
d) All of the mentioned

29
What could possibly be the environment of a Satellite Image Analysis System?
a) Computers in space and earth
b) Image categorization techniques
c) Statistical data on image pixel intensity value and histograms

d) All of the mentioned

30

Categorize Crossword puzzle in Fully Observable / Partially Observable.
a) Fully Observable
b) partially Observable
c) All of the mentioned
d) None of the mentioned

31 The game of Poker is a single agent.
a) True
b) False

32. Satellite Image Analysis System is (Choose the one that is not applicable).
a) Episodic
b) Semi-Static
c) Single agent
d) Partially Observable

33. An agent is composed of _____
a) Architecture
b) Agent Function
c) Perception Sequence
d) Architecture and Program

34 Which search agent operates by interleaving computation and action?
a) Offline search
b) Online search
c) Breadth-first search
d) Depth-first search

35 What is called an exploration problem?
a) State and actions are unknown to the agent
b) State and actions are known to the agent
c) Only actions are known to agent
d) None of the mentioned

36 . Which are necessary for an agent to solve an online search problem?
a) Actions
b) Step-cost function
c) Goal-test
d) All of the mentioned

37 When do we call the states are safely explorable?
a) A goal state is unreachable from any state
b) A goal state is denied access
c) A goal state is reachable from every state
d) None of the mentioned

38 . In which state spaces does the online-dfs-agent will work?
a) Irreversible state spaces
b) Reversible state spaces
c) Searchable state spaces
d) All of the mentioned

39 Which of the following algorithm is online search algorithm?
a) Breadth-first search algorithm
b) Depth-first search algorithm
c) Hill-climbing search algorithm
d) None of the mentioned

39. Which search algorithm will use limited amount of memory?
a) RBFS
b) SMA*
c) Hill-climbing search algorithm
d) Both RBFS & SMA*

40 What is meant by simulated annealing in artificial intelligence?
a) Returns an optimal solution when there is a proper cooling schedule
b) Returns an optimal solution when there is no proper cooling schedule
c) It will not return an optimal solution when there is a proper cooling schedule
d) None of the mentioned

41. How the new states are generated in genetic algorithm?
a) Composition
b) Mutation
c) Cross-over
d) Both Mutation & Cross-over

42 . Which method is effective for escaping from local minima?
a) Updating heuristic estimate
b) Reducing heuristic estimate
c) Eliminating heuristic estimate
d) None of the mentioned

43 Which depends on the percepts and actions available to the agent?
a) Agent
b) Sensor
c) Design problem
d) None of the mentioned

44 Which were built in such a way that humans had to supply the inputs and interpret the outputs?
a) Agents
b) AI system
c) Sensor
d) Actuators

45 Which technology uses miniaturized accelerometers and gyroscopes?
a) Sensors
b) Actuators
c) MEMS
d) None of the mentioned

46 What is used for tracking uncertain events?
a) Filtering algorithm
b) Sensors
c) Actuators
d) None of the mentioned

47 What is not represented by using propositional logic?
a) Objects

b) Relations
c) Both Objects & Relations
d) None of the mentioned

48 Which functions are used as preferences over state history?
a) Award
b) Reward
c) Explicit
d) Implicit

49 Which kind of agent architecture should an agent an use?
a) Relaxed
b) Logic
c) Relational
d) All of the mentioned

50 Specify the agent architecture name that is used to capture all kinds of actions.
a) Complex
b) Relational
c) Hybrid
d) None of the mentioned

51 . Which agent enables the deliberation about the computational entities and actions?
a) Hybrid
b) Reflective
c) Relational
d) None of the mentioned

52 What can operate over the joint state space?
a) Decision-making algorithm
b) Learning algorithm
c) Complex algorithm
d) Both Decision-making & Learning algorithm
